

## Create a miles/kilometers converter

Write a program that converts miles and kilometers, as shown in the following Figure. If you enter a value in the Mile text field and press the Enter key, the corresponding kilometer measurement is displayed in the Kilometer text field. Likewise, if you enter a value in the Kilometer text field and press the Enter key, the corresponding miles is displayed in the Mile text field.

## Text viewer

Write a program that displays a text file in a text area, as shown in following Figure. The user enters a file name in a text field and clicks the View button; the file is then displayed in a text area.
